The analysis:

- Performance-based navigation (PBN) is a great tool in improving the efficiency of air traffic management. However, PBN suffers from various difficulties including a long and difficult implementation process; a lack of global expertise; difficulty understanding the PBN Manual due to technical incompetence and language barriers; shortcomings in co-

reduce the size of, or grant civil aircraft additional access to, those restricted areas or prohibited airspace at least during peak hours.[60] Additionally, States should opt for more cross-border ANS provision. Greater cooperation and coordination between civil and military authorities, and between States, ´ZKLFK LV VWLOO EDVHG OGUJHC VRYHUHLJQW[61] JaQW[62] equired. States need to recognize that the concept of State sovereignty is an evolving concept, influenced by prevailing factors that are crucial for the society at a given time and circumstance. Environmental impacts of aviation are a prevailing concern now and, hence, may influence the notion of sovereignty of States over their airspace.

About Centre for Research in Air and Space Law

The McGill University Centre for Research in Air and Space Law is the principal research and educational outreach arm of McGill's Institute of Air & Space Law, established in 1951. The Institute provides the core degree-granting educational programme, while the Centre produces research, publishes books and other literature, and offers educational products around the world.

Since its inception in 1976, the Centre has published a number of
